Circle

STELLAR'S GLOBAL TALENT HUB · LIVE ON TESTNET

Get paid safely, even as a team.

Gigs, escrow and team payouts in USDC on Stellar. The client locks the money before work starts, and every team member is paid straight to their own wallet.

Boundless Build Day · Escrow by Trustless Work on Soroban · Built in Uyo, Nigeria, for the world

THE PROBLEM

Freelancers deliver the work. Then the risk starts.

Ghosted after delivery

The work is sent, the client goes quiet, and there is nothing to fall back on.

One wallet holds the team’s pay

Teams get paid through one lead, who then has to forward everyone’s share by hand.

Fake payment alerts

Screenshots and forged alerts “prove” a payment that never arrived.

Talent is everywhere. Safe, fair payment is not.

THE SOLUTION

Lock the money first. Pay every member straight to their wallet.

1

Post or find a gig

Apply solo, or as a team with a split.

→

2

Hire and lock USDC

Escrow on Stellar, before any work starts.

→

3

Deliver with proof

Mark each milestone done with a link.

→

4

Approve and pay

Each share released to its own wallet.

Example: a 30 USDC brand kit, split three ways, one milestone per person

THE PROOF

Built and running on Stellar today

● Live demo on testnet

Multi-release escrow

One milestone per person, locked before work starts.

Team splits

Up to 10 members, each paid to their own wallet.

On-chain receipts

Pay links count only after Stellar confirms asset, amount, wallet and memo.

Fair disputes

A disputed share freezes; it can be split, e.g. 70/30, in one transaction.

Wallet sign-in

SEP-10-style signature. Keys never leave the wallet.

Any skill, anywhere

12 categories, from code and design to translation and tutoring.

WHY STELLAR

Why we build on Stellar, not Solana

What freelancers need	Stellar + Circle	Solana
Built for	Payments and cross-border remittances, first	Fast general-purpose apps, DeFi and trading
Fees	Fixed base fee of 0.00001 XLM: tiny and predictable	Low base fee, plus priority fees that rise when the network is busy
Cash out locally	Anchors and MoneyGram Access turn USDC into local cash	Mostly through exchanges and third-party ramps
Escrow	Trustless Work: ready-made multi-release escrow on Soroban	Build or integrate your own

A freelancer needs a fee they can predict and a way to spend what they earn. That’s Stellar’s home turf.

THE TEAM · WHY US

We are the community Circle is for

D

Daniel

Front-end Developer

GDGoC Campus Lead

U

Ubongabasi

Co-lead · Product Co-developer

Co-builds the product end to end

B

Bassey

Product Manager

Works with GDGoC on her campus

F

Favour

Product QA & Testing

Notion Campus Community Manager, UniUyo, 2+ years

Built-in distribution. We already lead GDGoC and Notion campus communities: our first users are in our rooms.

We ship. Marketplace, escrow, team splits, disputes and pay links are live on testnet.

Built where the need is. Uyo, Nigeria: the freelancers we design for are our peers.

THE ASK

Make Circle Stellar’s global talent hub.

What we’re asking for

- Ecosystem backing to reach mainnet after a security audit
- Introductions to anchors for local cash-out, starting in Nigeria
- A place in Stellar’s community programmes to onboard campus talent worldwide

What we’ll do next

- Mainnet launch with audited escrow flows
- Ratings after payout, notifications and bounties
- Onboard student freelancers through GDGoC and Notion campus communities

Talent is everywhere. With Circle on Stellar, getting paid safely is too.

Thank you · Circle · Daniel, Ubongabasi, Bassey, Favour
